- Safeguards in place to promote platform innovation and development in an ethical and secure way.
- Explore Privacy & Security

Why Choose Progress Agentic RAG?

End-to-End Approach
Provides a comprehensive pipeline that allows fine-tuning of all processes without the need for coding.

Quality Metrics
Ensures that the outputs generated by the pipeline are based on quality and provides traceability back to the original source of information.

Flexibility with LLMs
Users are not tied to a specific Large Language Model (LLM), offering the flexibility to switch between different LLMs.

Multilingual Capability
Support multiple languages, which is crucial for the diverse needs of global customers.

Varied Deployment Options
Easy-to-use, SaaS approach - immediate access, benefits and governance of RAG technology with limited upfront investment in a flexible deployment model.

Advanced AI Search
Integrates cutting-edge AI search capabilities into digital platforms to offer AI Search and Generative answers on top of your information.

Use Cases

Legal
Process unstructured data in over 60 formats, including video, PDF, text, and tabular, in any language and from any source to get trusted answers for legal documents.

Sales
Reduce manual tasks and improve overall productivity, including automating administrative tasks, providing real-time guidance to sales. representatives and optimizing pricing strategies.

Customer Service
Respond to customers faster, increase agent productivity, reduce support costs, improve conversion rates, increase customer satisfaction scores, all while increasing revenue.

Product Development
Simplify prototyping, reduce development time and cost, validate user feedback, while optimizing resources and accelerating time to market.

Enterprise Search
Progress Agentic RAG enables unified natural language search and answers across your company's repositories, facilitating quick access to information for enhanced staff productivity.

Unstructured Data Querying
Progress Agentic RAG feature set enables users (across verticals) to search and retrieve relevant documents from vast repositories of unstructured data without relying on an LLM-generated output.

Chat Bots
Elevate your customer experience with a customized intelligent chatbot capable of handling customer queries and providing round-the-clock real-time support.

Knowledge Hubs & FAQs
Customize support, documentation and lesson plans to boost employee learning and optimize their usage efficiency.
